PHYS 133 - Lab 4 Retrograde Motion And Solar Altitude Mars Undergoes Retrograde

Motion, meaning the planet appears to move backwards when compared to the background stars for a while before going forward again. The reason for this is that Earth is in the inner orbit compared to Mars, so Earth moves faster than Mars. At certain times during the orbit, the Earth begins to approach and overtake Mars, which causes the line of sight between Earth and ... 4th, 2024
