Introduction To Real Analysis 4th Edition Bartle Solutions ... Very Common In Real Analysis, Since Manipulations With Set Identities Is Often Not Suitable When The Sets Are Complicated. Students Are Often Not Familiar With The Notions Of Functions That Are Injective (=one-one) Or Surjective (=onto). Sample Assignment: Exercises 1, 3, 9, 14, 15, 20. Partial Solutions: 1. 25th, 2024 Bartle - Introduction To Real Analysis - Chapter 6 Solutions Bartle - Introduction To Real Analysis - Chapter 6 Solutions Section 6.2 Problem 6.2-4. Let $A = \{x \in \mathbb{R} : x^2 = 2\}$; $B = \{x \in \mathbb{R} : x^2 = 1\}$; $C = \{x \in \mathbb{R} : x^2 = 0\}$. Let $f: A \rightarrow B$ be defined by $f(x) = x^2$. Find $f^{-1}(\{1\})$. Solution: $f^{-1}(\{1\}) = \{x \in A : x^2 = 1\} = \{x \in \mathbb{R} : x^2 = 2 \text{ and } x^2 = 1\} = \emptyset$. 7th, 2024 Bartle - Introduction To Real Analysis - Chapter 8 Solutions Bartle - Introduction To Real Analysis - Chapter 8 Solutions Section 8.1 Problem 8.1-2. Show that $\lim_{n \rightarrow \infty} (1 + \frac{1}{n^2})^n = e$ for all $x \in \mathbb{R}$. Solution: For $x = 0$, we have $\lim_{n \rightarrow \infty} (1 + \frac{1}{n^2})^n = \lim_{n \rightarrow \infty} (1 + 0)^n = 1 = e^0$. For $x \in \mathbb{R} \setminus \{0\}$, observe that $(1 + \frac{1}{n^2})^n = \exp(n \ln(1 + \frac{1}{n^2}))$. Since $\ln(1 + \frac{1}{n^2}) \sim \frac{1}{n^2}$ as $n \rightarrow \infty$, we have $n \ln(1 + \frac{1}{n^2}) \sim \frac{1}{n} \rightarrow 0$. Thus $\lim_{n \rightarrow \infty} (1 + \frac{1}{n^2})^n = \exp(0) = 1 = e^0$.
