5.1 The Poisson Distribution And The Poisson Process

226 An Introduction To Stochastic Modeling 2. For $S \geq 0$ and $T > 0$, The Random Variable X_s has The Poisson Distribution $P(X_s = k) = \frac{e^{-\lambda s} (\lambda s)^k}{k!}$ For $k = 0, 1, \dots$. In Particular, Observe That If X_t is A Poisson Process Of Rate $\lambda > 0$, Then The Moments Are $E[X_t] = \lambda t$ and $\text{Var}[X_t] = \lambda t$: Example Defects Occur Along An Undersea Cable According To A Poisson Process Of Rate Jan 3th, 2024
